EDUCATION

National University — Comilla, Bangladesh
BBA in Marketing Department — *Sep 2020 – Jun 2026*

SKILLS

Languages: JavaScript, PHP, SQL

Technologies: HTML, CSS, Wordpress Customisation, Tailwindcss, Bootstrap, ReactJS, Express, NodeJs

EXPERIENCE

Freelance Project — Fiverr and Local Market
Web Developer — *2020 – 2023*

- Developed a custom core PHP web application for a nutrition and healthcare service. Used object-oriented PHP to build key features like a BMI Calculator and Calorie Calculator. Researched accurate formulas and handled technical challenges to deliver user-friendly tools that boosted sales by offering free body calculations.
- Developed PHP-based multi-vendor website with secure payment gateway integrations, including bKash and PayPal, to enable smooth online transactions.
- Designed responsive, user-friendly front-end applications for high traffic use. Built complex grid layout WordPress blog website from scratch.

Webiyan — Rajshahi, Bangladesh (Remote)
Web Developer — *June 2023 – December 2024, Full-time*

- ∗ Worked on multiple problem solving websites, including e-commerce, LLM, and booking platforms. Reduced plugin usage and resolved both common and complex WordPress issues, such as white screen errors, SMTP form submission failures, and speed optimization challenges.

PROJECTS

E-commerce feature and BMI calculation | *GitHub*

- Developed the 'Diet Ghor' project, implementing e-commerce functionality along with features such as personalized body nutrition plans and BMI calculation tools.

Travel Blog | *Live Link*

- Designed and developed a complex grid-based system using WordPress, featuring a fully responsive layout adaptable to all devices, as well as a multi-step form submission process to enhance user experience and data collection efficiency.

Business Website | *Live Link*

- Developed a business website for a TikTok collaboration platform using WordPress, providing a user-friendly interface for influencers and brands to connect and collaborate effectively.

Platform Like App store | *Live Link*

- Built a frontend project using React.js and Tailwind CSS for a platform similar to an app store, where users can browse, download, and rate applications.
